Exam : **500-202**

Title : Implementing Cisco Service
Provider Mobile Unlicensed
Small Cell Solutions

Vendor : Cisco

Version : DEMO

NO.1 Why is the same client subnet difficult to load balance across ISGs?

- A. Two separate RADIUS accounting sessions must be established as traffic.
- B. Each subnet is associated with a control policy, and the policy server cannot process policy events from the same policy on different interfaces.
- C. The policy server is unable to identify which ISG the session belongs to.
- D. The ISG requires symmetrical traffic flows, and standard routing cannot determine the return path for client traffic.

Answer: D

NO.2 Which interface, as defined by the 3GPP standards, is used for policy control between the Policy and Charging Rules Function and the Policy and Charging Enforcement Function of the Cisco PGW?

- A. RADIUS CoA
- B. DIAMETER Gx
- C. DIAMETER Gy
- D. DIAMETER Rf

Answer: B

NO.3 Which three management applications have been integrated into Cisco Prime Infrastructure? (Choose three.)

- A. Cisco Prime Network Control System
- B. Cisco Prime LAN Management Solutions
- C. Cisco Prime Network Registrar
- D. Cisco Prime Assurance Manager
- E. Cisco Quantum Policy Suite
- F. Cisco Prime Access Registrar

Answer: A,B,D

NO.4 Which statement describes what happens upon failover of an ISG that employs stateless high availability for redundancy?

- A. The client traffic flows immediately through the secondary ISG because a session is already established.
- B. The client traffic flows immediately through the secondary ISG because a session is already established, but RADIUS accounting must restart.
- C. The client traffic flows after a new session has been established.
- D. The secondary ISG must query the primary ISG to learn the session parameters before client traffic can flow.

Answer: C

NO.5 In an architecture without an ISG, what is the policy control and enforcement function?

- A. Cisco eWAG
- B. the wireless LAN controller
- C. Cisco GGSN
- D. Cisco SGSN

Answer: C

NO.6 When a DHCP pool is created, how is the pool turned into a "dummy" pool?

- A. Disallow pings to verify if addresses are available to be assigned.
- B. Use the no dhcp enable command when the DHCP pool is configured.
- C. Set an exclusion range that contains all of the addresses that the pool would try to assign.
- D. Create the DHCP pool, but do not configure DHCP option 110.

Answer: C
